The two-letter codes on origin are designations for California natives and plants of other selected geographical origins. California natives, our single most important geographical group, are marked with a **CA**. Those of other western states are shown by a **WE**. Eastern states are marked **ES**. Plants of the Mediterranean region are marked with an **ME**. Australian plants have an **AU**. **NZ** is used for the plants of New Zealand. Those of South and southern Africa are designated with an **Saf**. Plants of Mexico are labeled **MX**; those of Central America, **CAm**; South America, **SAm**; **WA** for Western Asia; China and East Asia, including Japan, **Cea**; Europe, **Eur**; and plants of hybrid origin, **Hbd**. A note on Descriptions of Plant Condition: The last two columns of this list describe the condition of the plants listed as accurately as possible, in terms of the size and current blooming/fruiting status of each plant. In the first column, "Full" = fully rooted, nice plants. "Prime" = exceptional! In the second column, no entry indicates that the plant is neither budded nor blooming. "Buds" signify that buds are formed, and some may be opening. "Bloom" designates plants with open flowers. "Fruit", for plants with edible or ornamental berries or other seed structures, indicates that fruits are already formed. **Drought tolerant plants are marked with DT**
